Appendix 2 (as provided by the authors): Logistic regression analysis of factors associated with suspected drug-facilitated sexual assault (n = 882)

Factor	Adjusted OR (95% CI)	Decreased risk	Increased risk ——⇒			
Location of service (large urban centre/other)	2.31 (1.47-3.65)			_		
Employed (yes/no)	1.92 (1.34-2.76)		 -			
Used over-the-counter medications in 72 hr before examination (yes/no)	3.97 (2.47-6.38)		— 	-		
Used street drugs in 72 hr before examination (yes/no)	1.71 (1.12-2.62)		-			
Used alcohol immediately before (suspected) assault (yes/no)	4.00 (2.53-6.32)			-		
			1.00 2.00 3.00	4.00	5.00	6.00
			Adjusted (OR (95%	CI)	

Note: OR = odds ratio, CI= confidence interval.
